## Introduction

Eos loudspeakers are designed to deliver natural and accurate music reproduction. Eos loudspeakers are acoustically matched to obtain the best sound from your Eos Converge Amplified Receiver. To achieve the best sound from your Eos loudspeakers, please take a moment to read the instructions contained in this setup guide.

## Speaker Placement

For best stereo imaging, the left and right speakers should be the same distance from their respective side walls. To reduce bass, it is best to place the speaker at least 12" (.3M) from the wall behind the speaker. It also is best for the speakers to be placed at an equal distance from the listening position

**Note:** Eos loudspeakers are magnetically shielded to allow them to be placed near a television or computer monitor. If you notice any discoloration or distortion of the television or monitor's display, move the speakers away from the device.

## Speaker Wire Connection

When making connections, ensure that none of the strands of speaker wire come in contact with an adjoining speaker terminal.

1. Use your fingers to loosen the screw terminal to reveal the connection hole.
2. Insert the stripped end of the gold colored wire to the speaker terminal hole marked "+" then tighten the screw terminal. Insert the stripped end of silver colored wire to the terminal hole marked "-" then tighten the screw terminal. The stripped portion should be caught firmly in the connector post.
3. Repeat this procedure to setup the second loudspeaker.

## Amplified Receiver Wire Connection

Follow the diagram below to connect your speakers to the Eos Converge Amplified Receiver.

1. Use your thumb or fingers press the spring-loaded terminal tab to open the connection hole, once the stripped portion of the wire is in the hole, release the terminal tab. The wire should be caught firmly in the connector hole.
2. Connect the stripped end of gold colored wire to the speaker terminal hole marked "+" (red). Insert the stripped end of silver colored wire to the speaker terminal hole marked "-" (black)
3. To help obtain a better connection, it is important to pull slightly the wires after these have been secured in the terminals. This will cause the teeth inside the connectors to 'bite' into the wire.

Note - Mismatching of polarities will result in a distorted sense of sound direction. If this occurs, re-check the wiring.
