multi-room wireless audio
Music everywhere
.... without wires !

Add up to 4 wireless speakers for up to 5 rooms of music

iPod not included

Wireless music wherever you are

The Eos Multi-room home audio system gives you the freedom to put your music wherever you are. With Eos Wireless iPod speakers you can broadcast your music up to 150 feet away, inside or out -- all digital means no static, no interference. With the Eos whole-home iPod speaker system you can put your music in absolutely any room where you want -- the bedroom, the backyard, the kitchen, the bathroom...wherever you are.

All your music, all over

Plug your Eos iPod speakers into your computer and wirelessly stream thousands of internet radio stations to your Eos wireless speakers. With iTunes and your iPhone or iPod Touch (and Apple's free Remote Application) you can browse and play your entire music library, summon up playlists and even use search to find your favourite songs and artists...all from the palm of your hand.

Eos simplicity

Best of all Eos is easy, no complicated connection, no mind bending set-up -- just plug and start playing. Whether you're 8 or 80, you'll find Eos as simple to setup as a toaster. And unlike other wireless ipod speakers, Eos requires no wireless network connection, so you can take your Eos system everywhere you go -- even on vacation.

 without wires !

iPod not included

WIRELESS CONNECTION

Multi room audio without all the wires.

Play music from your iPod or another audio source across your home in up to 5 different rooms. No holes in walls. No wires to lay down. Plug and play.

iPOD COMPATIBLE

You keep your music collection on your iPod, now unleash it. The ultimate iPod dock speaker thanks to its wireless functionality, this DIY multiroom

INDOORS & OUTDOORS

Multi-room or multi-location? When you're entertaining this Summer, take your music with you by simply plugging one of the wireless speakers outside. Instantly your multi room system becomes an outdoor wireless audio system.

INTERFERENCE FREE

Wireless systems can be plagued by interference. But not this one. Using GigaWave digital wireless technology, this multiroom audio system broadcasts your music up to 150 feet. And not in the compressed MP3 format of other devices, but all in pristine CD quality.

What does it do?

The **Eos Wireless multi-room audio** system allows you to do just that: broadcast music across your whole house, wirelessly.

That might sound complicated.

It might sound expensive. It's not.

Multiroom audio set-ups have traditionally been expensive, That expense is a thing of the past with the Eos Wireless system.

Expandable

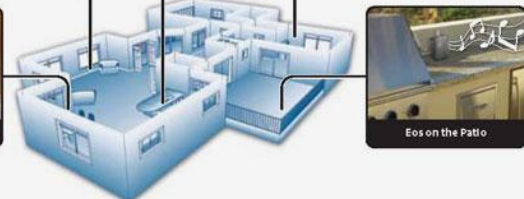

Having your music locked to one location is a thing of the past. With the Eos Wireless multiroom audio system you can plug in your iPod or other audio source and play your music in up to 5 rooms.

The core Eos Wireless system comes with two sets of speakers: those built into the dock base station and those built into receiver.

That's multiroom music into two rooms out of the box.

And if you want more? Add-on speakers are available individually.

You can buy up to 4 additional digital wireless speakers, giving you music in 5 rooms.
