

multi-room wireless audio
Music everywhere
 without wires !

Eos Converge Transmitter

The Eos Converge Transmitter is extremely versatile...it lets you play all your music, all over your house from virtually any audio source imaginable. Connect the Eos Converge Receiver to the USB port of your computer and stream music from iTunes or other music media player, even internet radio stations and more -- or connect to your home stereo theatre receiver or stereo system...even your iPod. With the Eos Converge Transmitter you can have your music from almost any audio device anywhere in your house, inside, outside, upstairs or down. With Eos Auto-Link, just turn the Eos Converge Amplified Receivers on and they're instantly part of your Eos Wireless System.

With the Eos Converge transmitter connected on a computer (with iTunes or other media player) you can control functions like play/pause and track forward and back from any Eos Converge Receiver -- or control your system remotely using an iPhone or iPod Touch and Apple's free Remote application.

All Eos products feature our legendary GigaWave wireless technology giving you the ability to broadcast Wi-Fi friendly, interference-free music over 150ft -- through walls floors ceiling and doors, inside or out. Best of all Eos does not require a WiFi network or a mind-bending complex set up -- you just plug and the Eos system plays.
